

MAREDDY KRITHIKA REDDY

Software Engineer • AI & Machine Learning

Hyderabad, India | +91 7730877498 | krithikareddy008@gmail.com | github.com/KrithikaReddy008 | linkedin.com/in/krithikareddy008

(2024-2028)

PROFILE

Computer Science undergraduate who likes turning machine learning ideas into things people can actually use — a bilingual Ayurvedic diagnosis tool, a triage assistant for underserved patients, a risk model trained on 70,000+ clinical records. Comfortable moving between Python/FastAPI on the backend, Flutter on mobile, and enough SQL and AWS to take a project from notebook to something demo-ready. Three hackathons in the past year, each one shipped and presented, not just prototyped.

TECHNICAL SKILLS

Languages: Java, Python, C, Dart

Backend & Web: FastAPI, HTML, CSS, JavaScript, PHP

Machine Learning: Scikit-learn, Pandas, NumPy

Mobile: Flutter

Tools & Cloud: Git, AWS, SQL

PROJECTS

VaidyaAI — AI-Based Ayurvedic Disease Prediction System [Link](#)

April 2026

- Built a symptom-to-diagnosis web app that maps patient-reported symptoms to probable Ayurvedic conditions using a model trained from scratch, rather than wrapping an existing API.
- Collected and cleaned a custom symptom–disease dataset, then iterated across model choices to balance accuracy against explainability for non-technical users.
- Shipped a FastAPI backend serving predictions in both English and Telugu, so the tool works for people more comfortable in their native language.

Heart Disease Risk Prediction [Link](#)

April 2026

- Benchmarked Logistic Regression, Random Forest, KNN, and SVM on a 70,000-record clinical dataset to compare accuracy against inference speed.
- Tuned Random Forest to ~74% accuracy and validated it against the other three models before settling on it as the production choice.

AI-Powered Multilingual Medical Triage System — Vivitsu Hackathon [Link](#)

January 2026

- Designed a triage pipeline that reads multilingual patient input and returns an urgency score plus a doctor-ready summary, cutting down manual sorting.
- Built specifically for underserved, non-English-speaking communities, where language is often the real barrier standing between a patient and timely care.

EcoLearn — Gamified Learning App (NHETIS Hackathon) [Link](#)

September 2025

- Built a Flutter app that turns environmental education into a point-and-level game, with an AI assistant answering student questions in real time.
- Used Provider for state management and SharedPreferences to persist a student's progress across sessions without needing a backend server.

HACKATHONS

- Vivitsu Hackathon — *AI-powered multilingual medical triage with doctor connectivity*
- NHETIS Hackathon — *built EcoLearn, a gamified environmental education app*
- Google Developer Day 2025 — *presented an Urban Traffic Flow Monitor concept*

EDUCATION

Gokaraju Rangaraju Institute of Engineering and Technology

Since Sept 2024

Bachelor of Technology in Computer Science and Engineering — CGPA: 8.15

Hyderabad, Telangana

Sri Chaitanya Junior Kalasala

Sep 2022 – May 2024

Intermediate (Class XII) — 88.10%

Hyderabad, Telangana

Sri Chaitanya Techo Curriculum

Jun 2021 – Jun 2022

SSC (Class X) — CGPA: 9.7

Hyderabad, Telangana

CERTIFICATIONS

- EduPyramids (IIT Bombay) — Java Training [Link](#)
- IBM — Build with Intelligence [Link](#)
- AWS — Building RAG Workflows [Link](#)
- UiPath — RPA Developer Foundation [Link](#)

May 2026

September 2025

September 2025
